Treatment Plant
• If you do not have a septic system in your yard, then the wastewater will go through a sewer.

• Wastewater doesn’t travel directly from homes to the ocean or rivers; something happens to it in between…it gets cleaned at a wastewater treatment plant.

• Hold up the picture of the Wastewater Treatment Plant.

• A wastewater treatment plant is different from a water treatment plant. A water treatment plant cleans the water before we use it, and a wastewater treatment plant cleans the water after we use it, before it goes back into the environment.
